

POOLS WITH OVERFLOW CHANNEL

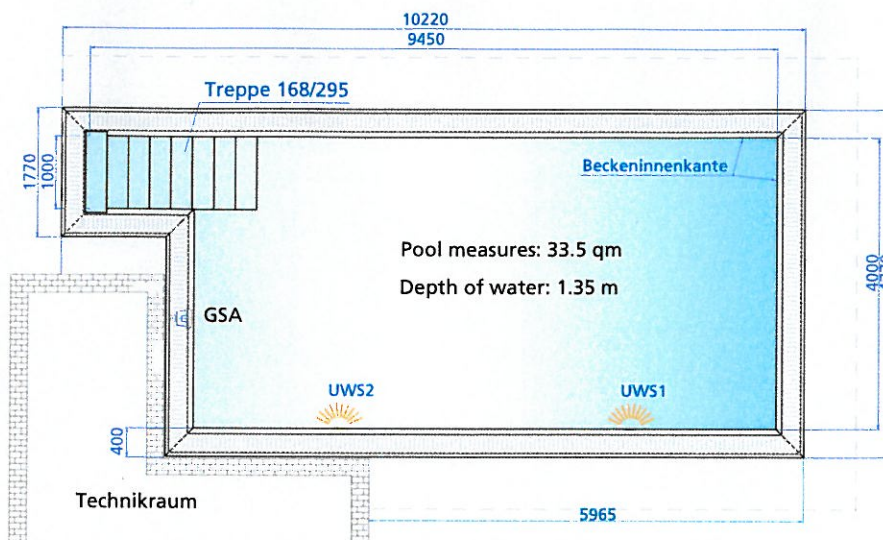

Outdoor pool with movable roofing

We developed a private pool with overflow channel for a generously laid out garden property.

This pool can be entered by comfortable stairs which are located at the front of the pool. Two underwater spots arrange for light in the pool.

There is also a segmentally movable cover to save energy and, of course, to extend the normal bathing season.

The water treatment plant is located directly next to the pool in the equipment basement whose roof can be used as terrace.

Technical Specifications:

Pool measures: 9.45 m (8.00) x 4.00 m
Depth of water: 1.35 m

Water technique: Company OSPA

Edelstahl-Schwimmbad-
und Metallbau GmbH
